Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
2. Claims 4 and 6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
3. Claim 4 recites the limitation "the carriage" in line 2. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1 and 2 are rejected under 35 U.S.C. 102(e) as being anticipated by Bonnet.

A conveyor system for transporting containers includes all the claimed features and in particular includes: (claim 1) a conveyor 10 having a curved transport path; a container propulsion mechanism 20; the curved transport path constructed for

Art Unit: 3651

movement of the container in an inwardly inclined disposition for reducing centrifugal forces; and (claim 2) the outer side of a container 100 being elevated in relation to the inner side of the container.

Allowable Subject Matter

6. Claims 3, 5 and 7-18 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

7. The following is a statement of reasons for the indication of allowable subject matter: the conveyor system for transport containers including the unique features of (i) 'conveyor having a guided on an outer guide rail of the conveyor for lifting the container'; and (ii) 'two rails disposed at an elevation sufficient to lift the container and supporting outer side of the container' both in combination with the rest of the claim language are not taught or fairly suggested by the prior art.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following are cited to show the art with respect to conveyor systems having inclination for limiting centrifugal forces of objects being transferred: Shaver, Steeber et al.('697), Steeber et al. ('264), Wirth et al., and Johnston.
